

ABSTRACT OF THE DISCLOSURE

In aircraft cargo decks are provided to receive loads stored in the cargo compartment (9). The aircraft comprises an outer
5 skin (12) to which ribs (11) are attached. To simplify the construction and the assembly it is proposed that the cargo deck be composed of a plurality of floor modules (20), which are fixed within the cargo compartment (9) and form the cargo deck. To the ribs (11) are attached longitudinal beams (35),
10 on which the floor modules (20) can be mounted.
